

HAUK & SASKO

INGENIEURGESELLSCHAFT MBH

HAUK & SASKO Ingenieurgesellschaft mbH's business unit Information Systems offers latest software technology solutions such as our standard products UKIS[®], BaBS and MBS. We also offer high quality IT services to enterprises from all different sectors.

Company Overview - HAUK & SASKO Information Systems

Our focus lies on:

- developing and realising information systems for enterprise content-, document-, knowledge-, fuel- and production management
- integrating various applications from the areas of manufacturing, production and enterprise management
- consulting our clients on the use of IT systems.

Business Unit Information Systems

- Established in 1981
- Consulting
- Software-Engineering
- Realisation and Marketing of standard products such as

Webbased Knowledge Provider UKIS

UKIS is an webbased information system which provides access to documents, information and content via a browser – across different physical locations, IT systems and platforms. It is a flexible, modular solution that can be tailored to match our customer's specific needs and problems.

MBS Fuel Management System

MBS is an integrated solution for substance flow management for fuels, additives and coal combustion products in thermal power stations. Our fuel management system addresses all relevant business processes in fuel management, from delivery and quality management to CO₂ emissions monitoring and reporting.

HAUK & SASKO - Your partner for software technology solutions

Since 1981, HAUK & SASKO has been developing technologies that allow our clients to overcome the information barriers in their organisations.

Our products UKIS, MBS and BaBS include solutions for knowledge and document management systems, Intranet platforms and solutions for fuel management. Among our customers are large corporations, but also small and medium sized enterprises from many different sectors.
