

## ***Technical system documentation solutions***

For years you may have had a productive facility - nevertheless, the immense knowledge of individual components as well as documents lie scattered on several servers, in different systems, in paper folders or in extreme cases, only in the heads of individual employees. UKIS will give you transparency in your technical documentation.

### ***Navigation structures***

The technical documentation solution UKIS allows the navigation in information on the basis of reference designation systems. In UKIS any reference key systematic can be configured. Typical examples of such keys are the reference designation system KKS or the company specification key BSS as well as enterprise specific product or article numbers. Reduce the downtime of your systems for maintenance and act more quickly in order to increase your productivity.

### ***Automatic conversion***

Documents are always maintained in the original format in UKIS. The documents will be automatically converted into a web-enabled format and linked the moment they are opened.

### ***Automatic linking***

Because of its unique automatic linking technology, DIN standards, environmental regulations, reference designation systems etc. are detected using syntax patterns and are automatically linked with the corresponding object-level in their technical database therefore they are always up to date.

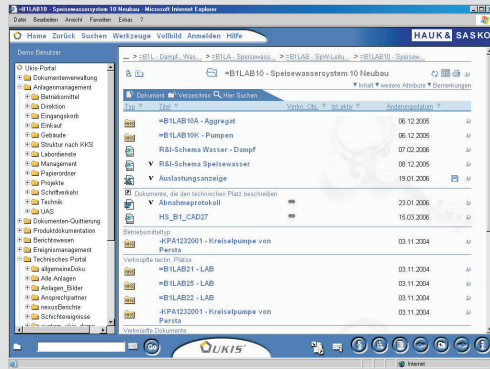

### ***Knowledge-system***

You have various systems where business-relevant information is existent? No problem - UKIS links your information and application units into a single-system and therefore protects investments already made.

# IT-based technical plant documentation with UKIS

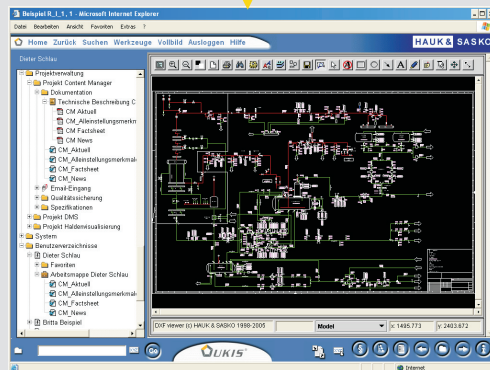

## Online search for paper files

Searching through paper files for the right information is a thing of the past. With a scanner interface using OCR (Optical Character Recognition) scanned maintenance logs, calibration certificates, operation journals etc. can be content searched and managed.

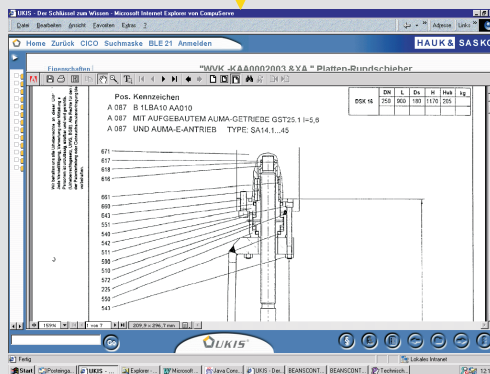

## Lightning fast search results

The UKIS search engine is able to jump directly to a reference highlighted in PDF and in CAD. At the same time, the references within the CAD drawing are visualized by a flashing to enable a quick navigation (see screen shots to the right).

## Support for workflow

Other functions are for example CAD and text differential display, automatic notification of document changes, as well as an integrated authorization concept, including access permissions for sensitive data.
