

AUTOMATION ENGINEER (M/W/D)

As a medium-sized company, HAUK & SASKO is one of the leading providers of digitalization solutions for the energy industry, port operations, and mining. Our competitive position is defined by our focus on core business areas: fuel and material flow management as well as web-based operational management applications. In both areas, we develop applications and IT solutions based on our proprietary standard products UKIS® and MBS®. All our solutions are integrated system that combine our software with sensors, IoT devices and communication networks.

With our material flow and fuel management system MBS, we are market leader in digitalization solution for material handling in plants. Details of the MBS product concept and application examples can be found on our website.

JOB RESPONSIBILITIES

- › You will thoroughly familiarize yourself with the complex topic of material flow management and HAUK & SASKO's solution portfolio.
- › With your extensive technical expertise, you will competently advise customers on business processes, application usage, and IT technologies.
- › You see yourself as an organizer and implementer in customer support, and project management.
- › In the context of the implementation of our projects, you will manage subcontractor and vendors.
- › You will contribute to the systems & sensor integration and the implementation and commissioning of automation technology.
- › You will commission our solutions on-site at the customer, in coordination with our back office.
- › You will conduct analyses, provide technical consulting, create documentation, and handle software and systems maintenance.
- › In close contact with customers and your project team colleagues, you will drive processes forward and contribute your ideas and technical innovations.

REQUIREMENTS

- › Completed degree or vocational training in computer science, electrical engineering, or automation technology.
- › Experience in industrial automation, electrical engineering, and internet of things (IoT).
- › Knowledge of programmable logic controllers (PLCs), SCADA and control systems (e.g., Siemens, ABB) is an advantage.
- › You are communicative and enjoy service-oriented customer support.
- › You enjoy solving problems in project work and IT support.
- › You are comfortable in an international environment and have good English skills.
- › You are customer-focused and can convincingly represent our services. You act with technical confidence and provide comprehensive and competent advice to our clients' departments.
- › You enjoy contributing to innovative projects with well-known clients.

OUR OFFER

- › We are offering a permanent position with plenty of autonomy.
- › The company operates with a flat hierarchy and a dynamic team.
- › Competitive salary and benefits package
- › New office space with optimal transport connections (subway/bus, motorway) and shower facilities for example for cyclists.
- › No constantly changing projects or clients
